

OVERVIEW

SKU-level inventory analytics for real product categories — Electronics peak Nov-Dec, Clothing peaks Apr/Sep — with SQL reorder calculations.

BUSINESS OBJECTIVE

Identify SKUs at stockout risk and generate reorder recommendations based on safety stock thresholds and demand forecasts.

KEY METRICS

|                                                |                                                       |                                                               |                                                 |

KEY FINDINGS & INSIGHTS

- Electronics demand doubles in Nov-Dec (holiday); Clothing peaks in Apr and Sep
- Safety stock set at 1.5x lead-time demand to buffer against demand spikes
- SQL surfaces top 10 SKUs where current stock falls below 2x average demand
- Forecast vs actual comparison quantifies model accuracy by category
- Reorder report exported to CSV for direct procurement team use
